## About Me

---

Passionate and detail-oriented Software Developer specializing in Android application development, with hands-on experience building several functional and user-friendly apps. Strong problem-solving mindset with the ability to design and implement efficient solutions. Enthusiastic about exploring and adapting to emerging technologies to deliver innovative software solutions.

## Technologies

---

**Programming Languages:** C++, Java, Dart, Solid understanding of object-oriented programming concepts.

**Framework & Technologies:** Native Android (Java), Flutter, Git, GitHub.

**Database:** Firebase, SQL(MySQL).

**Tools:** VS Code, Android Studio, CodeBlocks.

## Projects

---

### Chat App

- Developed a real-time messaging application enabling users to send and receive instant messages. Implemented responsive UI and real-time communication features to support seamless user interaction, using efficient backend logic and data synchronization.
- Tools Used: Java, XML, Firebase

[Source Code](#) 

### Recycle App

- Developed a mobile application that promotes eco-friendly behavior by allowing users to dispose of various types of waste such as glass, plastic, paper, and batteries and earn virtual coins as rewards which can be redeemed for goods within the app.
- Tools Used: Flutter, Firebase.
